

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

SECTION 1 Identification of the substance / mixture and of the company / undertaking

Product Name	3-CHLOROBENZOTRIFLUORIDE
Chemical Name	Not Available
Synonyms	C7-H4-Cl-F3; ClC6H4CF3; toluene, m-chloro-alpha,alpha,alpha-trifluoro-; benzene, 1-
	chloro-3-(trifluoromethyl)-; m- chlorobenzotrifluoride; (m-chlorophenyl)trifluoromethane; m-
	chlorotrifluoromethylbenzene; 1-chloro-3-(trifluoromethyl)benzene; m-
	(trifluoromethyl)chlorobenzene; alpha,alpha,alpha,trifluoro-3-chlorotoluene; m-
	trifluoromethylphenyl chloride
Proper shipping name	CHLOROBENZOTRIFLUORIDES
Chemical Formula	C7H4ClF3
Other means of identification	Not available
CAS Number	98-15-7

Relevant identified uses of the substance or mixture and uses advised against:

Relevant identified uses	Intermediate in the manufacture of dyes and herbicides (dinitroanilines),
	pharmaceuticals, dielectrics and insecticides

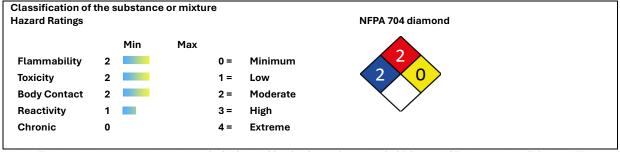

Details of the manufacturer or supplier of the safety data sheet:

Registered company name	Cohizon Life Sciences Limited
Address	Plot No. 6102/3, 6117-19, 5809-10, GIDC, Ankleshwar Gujarat 393002 India
Telephone	Not Available
Fax	Not Available
Website	Not Available
Email	Not Available

Emergency telephone number:

Α	ssociation / Organisation	Cohizon Life Sciences Limited
	mergency telephone umber(s)	(+91) 7046611150/51
	theremergency telephone umber(s)	(+91) 6357684904

SECTION 2 Hazards identification

Note: The hazard category numbers found in GHS classification in section 2 of this SDSs are NOT to be used to fill in the NFPA 704 diamond. Blue = Health Red = Fire Yellow = Reactivity White = Special (Oxidizer or water reactive substances.

Classification	Flammable Liquids Category 3, Acute Toxicity (Oral) Category 4, Acute Toxicity (Dermal) Category 5, Skin Corrosion/Irritation Category 2, Serious Eye Damage/Eye Irritation Category 2A, Specific Target Organ Toxicity - Single Exposure (Respiratory Tract Irritation) Category 3, Hazardous to the Aquatic Environment Long-Term Hazard Category 2
----------------	---

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

Label elements

Hazard pictogram(s)	<u>₩</u> ! <u>₩</u>	
---------------------	---------------------	--

Signal word	Warning

Hazard statement(s)

H226	Flammable liquid and vapour.
H302	Harmful if swallowed.
H313	May be harmful in contact with skin.
H315	Causes skin irritation.
H319	Causes serious eye irritation.
H335	May cause respiratory irritation.
H411	Toxic to aquatic life with long lasting effects.

Precautionary statement(s) Prevention

· · · · · · · · · · · · · · · · · · ·	
P210	Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No
	smoking.
P271	Use only outdoors or in a well-ventilated area.
P240	Ground and bond container and receiving equipment.
P241	Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment.
P242	Use non-sparking tools.
P243	Take action to prevent static discharges.
P261	Avoid breathing mist/vapours/spray.
P264	Wash all exposed external body areas thoroughly after handling.
P270	Do not eat, drink or smoke when using this product.
P273	Avoid release to the environment.
P280	Wear protective gloves, protective clothing, eye protection and face protection.

Precautionary statement(s) Response

Trecautionary statement(s) nesponse	
P302+P312	IF ON SKIN: Call a POISON CENTER/doctor/physician/first aider if you feel unwell.
P370+P378	In case of fire: Use alcohol resistant foam or fine spray/water fog to extinguish.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if
	present and easy to do. Continue rinsing.
P337+P313	If eye irritation persists: Get medical advice/attention.
P391	Collect spillage.
P301+P312	IF SWALLOWED: Call a POISON CENTER/doctor/physician/first aider if you feel unwell.
P302+P352	IF ON SKIN: Wash with plenty of water and soap.
P303+P361+P353	IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with
	water [or shower].
P304+P340	IF INHALED: Remove person to fresh air and keep comfortable for breathing.
P330	Rinse mouth.
P332+P313	If skin irritation occurs: Get medical advice/attention.
P362+P364	Take off contaminated clothing and wash it before reuse.

Precautionary statement(s) Storage

P403+P235	Store in a well-ventilated place. Keep cool.
P405	Store locked up.

Precautionary statement(s) Disposal

P501	Dispose of contents/container to authorised hazardous or special waste collection point
	in accordance with any local regulation

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

SECTION 3 Composition / information on ingredients

Substances

Cas No.	%[weight]	Name
98-15-7	>98	3-Chlorobenzotrifluoride

Mixtures

See Section above for composition of substances

SECTION 4 First aid measures

Description of first aid me	easures		
	If this product comes in contact with the eyes:		
Eye Contact	Wash out immediately with fresh running water.		
	 Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. 		
	 Seek medical attention without delay; if pain persists or recurs seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by 		
	skilled personnel.		
	If skin or hair contact occurs:		
	Immediately remove all contaminated clothing, including footwear.		
Skin Contact	Flush skin and hair with running water (and soap if available		
	Seek medical attention in event of irritation		
	 If fumes or combustion products are inhaled remove from contaminated area. Lay patient down. Keep warm and rested. 		
	 Prostheses such as false teeth, which may block airway, should be removed, 		
lada a lawi a a	where possible, prior to initiating first aid procedures.		
Inhalation	Apply artificial respiration if not breathing, preferably with a demand valve		
	resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary.		
	Transport to hospital, or doctor, without delay.		
	IF SWALLOWED, REFER FOR MEDICAL ATTENTION, WHERE POSSIBLE, WITHOUT DELAY.		
	For advice, contact a Poisons Information Centre or a doctor.		
	Urgent hospital treatment is likely to be needed		
	 In the mean time, qualified first-aid personnel should treat the patient 		
	following observation and employing supportive measures as indicated by the patient's condition.		
Ingestion	If the services of a medical officer or medical doctor are readily available, the patient should be placed in his/her care and a copy of the SDS should be		
	provided. Further action will be the responsibility of the medical specialist.		
	If medical attention is not available on the worksite or surroundings send the		
	patient to a hospital together with a copy of the SDS.		
	Where medical attention is not immediately available or where the		
	patient is more than 15 minutes from a hospital or unless instructed otherwise:		
	INDUCE vomiting with fingers down the back of the throat, ONLY IF		
	CONSCIOUS. Lean patient forward or place on left side (head-down		
	position, if possible) to maintain open airway and prevent aspiration.		
	NOTE: Wear a protective glove when inducing vomiting by mechanical means		

Indication of any immediate medical attention and special treatment needed

As in all cases of suspected poisoning, follow the ABCDEs of emergency medicine (airway, breathing, circulation, disability, exposure), then the ABCDEs of toxicology (antidotes, basics, change absorption, change distribution, change elimination).

For poisons (where specific treatment regime is absent):

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

Basic Treatment:

- Establish a patent airway with suction where necessary.
- Watch for signs of respiratory insufficiency and assist ventilation as necessary
- Administer oxygen by non-rebreather mask at 10 to 15 L/min
- Monitor and treat, where necessary, for pulmonary oedema
- Monitor and treat, where necessary, for shock
- Anticipate seizures
- **DO NOT** use emetics. Where ingestion is suspected rinse mouth and give up to 200 ml water (5 ml/kg recommended) for dilution where patient is able to swallow, has a strong gag reflex and does not drool.

Advanced Treatment:

- Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.
 Positivepressure ventilation using a bag-valve mask might be of use.
- Monitor and treat, where necessary, for arrhythmias.
- Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications. Drug therapy should be considered for pulmonary oedema.
- Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.
 Treat seizures with diazepam.
- Proparacaine hydrochloride should be used to assist eye irrigation.

BRONSTEIN, A.C. and CURRANCE, P.L.

EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994 Treat symptomatically.

SECTION 5 Firefighting measures

Extinguishing media

- Water Spray or fog
- Foam
- Dry Chemical Powder
- BCF (where regulations permit).
- Carbon dioxide

Special hazards arising from the substrate or mixture

Fire Incompatibility	Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches,	
	pool chlorine etc. as ignition may result.	

Advice for firefighters

Advice for firefighters				
	Alert Fire Brigade and tell them location and nature of hazard.			
	Wear breathing apparatus plus protective gloves			
	Prevent, by any means available, spillage from entering drains or water courses			
	Fight fire from a safe distance, with			
	adequate cover.			
Fire Fighting	If safe, switch off electrical equipment until vapour fire hazard removed			
	Use water delivered as a fine spray to control fire and cool adjacent area			
	Avoid spraying water onto liquid pools			
	DO NOT approach containers suspected to be hot			
	Cool fire exposed containers with water spray from a protected location			
	If safe to do so, remove containers from path of fire			
	Liquid and vapour are flammable wetted with water.			
Fine /Franks is a Hanned	 Moderate fire hazard when exposed to heat or flame. 			
Fire/Explosion Hazard	Vapour forms an explosive mixture with air.			
	Moderate explosion hazard when exposed to heat or flame			

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

 Vapour may travel a considerable distance to source of ignition
 Heating may cause expansion or decomposition leading to violent rupture of containers.
On combustion, may emit toxic fumes of carbon monoxide (CO
Combustion products include.
carbon monoxide (CO)
carbon dioxide (CO2)
Hydrogen Chloride
• Phosgene
Hydrogen Fluoride
 Other pyrolysis products typical of burning organic material.

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

	ntainment and cleaning up		
	Remove all ignition sources.		
	DO NOT touch or walk through spilled material		
	Clean up all spills immediately.		
	Avoid breathing vapours and contact with skin and eyes.		
Minor Spills	Control personal contact with the substance, by using protective equipment.		
	Contain and absorb small quantities with vermiculite or other absorbent		
	material.		
	Wipe up.		
	Collect residues in a flammable waste container.		
	Clear area of personnel and move upwind.		
	Alert fire Brigade and tell them location and nature of hazard.		
	DO NOT touch or walk through spilled material		
	Wear full protective clothing and breathing apparatus		
	Prevent, by any means available, spillage from entering drains or water courses.		
	No smoking, naked lights or ignition sources		
	Increase ventilation		
	Stop leak if safe to do so.		
Major Spills	Contain spill with sand, earth or vermiculite.		
	Contain or cover with sand, earth or vermiculite.		
	Use only spark-free shovels and explosion proof equipment.		
	Collect recoverable products into labelled containers for recycling.		
	Collect solid residues and seal in labelled drums for disposal		
	Wash area with water and dike for later disposal; prevent runoff into drains.		
	After clean up operations, decontaminate and launder all protective clothing		
	and equipment before storing and re-using.		
	If contamination of drains or waterways occurs, advise emergency services.		

Personal Protective Equipment advice is contained in Section 8 of the SDS

SECTION 7 Handling and storage

Precautions	for safe	handling

i recautions for safe namuun	5		
	•	Containers, even those that have been emptied, may contain explosive vapours	
Safe Handling	•	Do NOT cut, drill, grind, weld or perform similar operations on or near containers	
	•	DO NOT allow clothing wet with material to stay in contact with skin	

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

	A control of the cont
	Avoid all personal contact, including inhalation We are not be this of the private of a very power and the personal contact.
	Wear protective clothing when risk of overexposure occurs
	Use in a well-ventilated area Provent appearantiation in hellows and summs
	Prevent concentration in hollows and sumps ONOT enter confined energy until atmosphere has been checked.
	 DO NOT enter confined spaces until atmosphere has been checked. Avoid smoking, naked lights or ignition sources
	 Avoid smoking, naked lights or ignition sources Avoid generation of static electricity
	DO NOT use plastic buckets
	Earth all lines and equipment
	Use spark-free tools when handling
	Avoid contact with incompatible materials
	When handling, DO NOT eat, drink or smoke
	Keep containers securely sealed when not in use
	Avoid physical damage to containers
	Always wash hands with soap and water after handling
	Work clothes should be laundered separately
	Use good occupational work practice
	Observe manufacturer's storage and handling recommendations contained within this SDS.
	 Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions.
	Store in original containers in approved flammable liquid storage area.
	Store away from incompatible materials in a cool, dry, well-ventilated area.
	DO NOT store in pits, depressions, basements or areas where vapours may be trapped
	 No smoking, naked lights, heat or ignition sources.
	Storage areas should be clearly identified, well illuminated, clear of
	obstruction and accessible only to trained and authorized personnel -
	adequate security must be provided so that unauthorized personnel do not have access.
	Store according to applicable regulations for flammable materials for storage
	tanks, containers, piping, buildings, rooms, cabinets, allowable quantities and minimum storage distances.
Other information	 Use non-sparking ventilation systems, approved explosion proof equipment and intrinsically safe electrical systems.
	 Have appropriate extinguishing capability in storage area (e.g. portable fire extinguishers - dry chemical, foam or carbon dioxide) and flammable gas detectors.
	Keep adsorbents for leaks and spills readily available.
	Protect containers against physical damage and check regularly for leaks.
	Observe manufacturer's storage and handling
	recommendations contained within this SDS. In
	addition, for tank storages (where appropriate):
	 Store in grounded, properly designed and approved vessels and away from incompatible materials.
	For bulk storages, consider use of floating roof or nitrogen blanketed vessels;
	where venting to atmosphere is possible, equip storage tank vents with flame
	arrestors; inspect tank vents during winter conditions for vapour/ ice build-up.
	Storage tanks should be above ground and diked to hold entire contents.
Conditions for safe storage	

Conditions for safe storage, including any incompatibilities

	•	Packing as supplied by manufacturer:
Suitable container	•	Plastic containers may only be used if approved for flammable liquid.
	•	Check that containers are clearly labelled and free from leaks.

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

	For low viscosity materials (i): Drums and jerry cans must be of the non-
	removable head type. (ii): Where a can is to be used as an inner package, the
	can must have a screwed enclosure.
	 For materials with a viscosity of at least 2680 cSt. (23 deg. C)
	 For manufactured product having a viscosity of at least 250 cSt. (23 deg. C)
	 Manufactured product that requires stirring before use and having a viscosity of
	at least 20 cSt (25 deg. C): (i) Removable head packaging; (ii) Cans with friction
	closures and (iii) low pressure tubes and cartridges may be used
	 Where combination packages are used, and the inner packages are of glass,
	there must be sufficient inert cushioning material in contact with inner and
	outer packages.
	 In addition, where inner packaging's are glass and contain liquids of packing
	group I there must be sufficient inert absorbent to absorb any spillage, unless
	the outer packaging is a close fitting moulded plastic box and the substances
	are not incompatible with the plastic.
Stavaga incompatibility	Avoid strong bases.
Storage incompatibility	Avoid reactions with oxidising agents.

Control Parameters

Occupational Exposure Limits (OEL)

INGREDIENT DATA

Ingredient	Original IDLH	Revised IDLH
3-chlorobenzotrifluoride	Not Available	Not Available

Exposure controls		
Appropriate engineering controls	 Engineering controls are used to remove a hazard or posteween the worker and the hazard. Well-designed exproved can be highly effective in protecting workers be independent of worker interactions to provide this protection. The basic types of engineering controls are: Process controls which involve changing the way a jour is done to reduce the risk. Enclosure and/or isolation of emission source which hazard "physically" away from the worker and ventilar strategically "adds" and "removes" air in the work enviolent ventilation can remove or dilute an air contaminant if properly. The design of a ventilation system must may process and chemical or contaminant in use. Emplouse multiple types of controls to prevent employee on For flammable liquids and flammable gases, local exprocess enclosure ventilation system may be require equipment should be explosion-resistant. Air contaminants generated in the workplace possess velocities which, in turn, determine the "capture velocitics which, in turn, determine the "capture velocitics which, in turn, determine the "capture velocitics" 	engineering and will typically s high level of b activity or process keeps a selected tion that rironment. designed tch the particular yers may need to verexposure. haust ventilation or a d. Ventilation s varying "escape" pocities" of fresh

Г	ahamical evapoura hadin ava irridation immediately and remove
	chemical exposure, begin eye irrigation immediately and remove
	contact lens as soon as practicable. Lens should be removed at the
	first signs of eye redness or irritation - lens should be removed in a
	clean environment only after workers
	 have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59].
Skin protection	See Hand protection below
	Wear chemical protective gloves, e.g. PVC.
	Wear safety footwear or safety gumboots, e.g. Rubber
	The selection of suitable gloves does not only depend on the material, but also
	on further marks of quality which vary from manufacturer to manufacturer.
	Where the chemical is a preparation of several substances, the resistance of
	the glove material can not be calculated in advance and has therefore to be
	checked prior to the application.
	The exact break through time for substances has to be obtained from the
	manufacturer of the protective gloves and has to be observed when making a final choice.
	Personal hygiene is a key element of effective hand care. Gloves must only be worn
	on clean hands. After using gloves, hands should be washed and dried thoroughly.
	Application of a non-perfumed moisturizer is recommended.
	Suitability and durability of glove type is dependent on usage. Important factors in
	the selection of gloves include:
	 frequency and duration of contact,
	chemical resistance of glove material,
	glove thickness and
	• dexterity
	Select gloves tested to a relevant standard (e.g. Europe EN 374, US F739, AS/NZS 2161.1 or national equivalent).
	 When prolonged or frequently repeated contact may occur, a glove with a protection class of 5 or higher (breakthrough time greater than 240 minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.
Hands/feet protection	When only brief contact is expected, a glove with a protection class
	of 3 or higher (breakthrough time greater than 60 minutes according to EN 374, AS/NZS 2161.10.1 or national equivalent) is recommended.
	Some glove polymer types are less affected by movement and this should be taken into account when considering gloves for long-term
	use.
	Contaminated gloves should be replaced. As defined in ASTM F 739, 96 in any application, gloves are rated as:
	As defined in ASTM F-739-96 in any application, gloves are rated as: • Excellent when breakthrough time > 480 min
	Good when breakthrough time > 20 min
	Fair when breakthrough time < 20 min
	Poor when glove material degrades
	For general applications, gloves with thickness typically greater than 0.35 mm, are
	recommended.
	It should be emphasized that glove thickness is not necessarily a good predictor of glove resistance to a specific chemical, as the permeation efficiency of the glove will be dependent on the exact composition of the glove material. Therefore, glove selection should also be based on consideration of the task requirements and
	knowledge of breakthrough times.
	Glove thickness may also vary depending on the glove manufacturer, the glove type
	and the glove model. Therefore, the manufacturers' technical data should always be taken into account to ensure selection of the most appropriate glove for the task.
	Note: Depending on the activity being conducted, gloves of varying thickness may be required for specific tasks. For example:
	Thinner gloves (down to 0.1 mm or less) may be required where a high
	degree of manual dexterity is needed. However, these gloves are only

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

	likely to give short duration protection and would normally be just for single use applications, then disposed of.		
	Thicker gloves (up to 3 mm or more) may be required where there is a mechanical (as well as a chemical) risk i.e. where there is abrasion or		
	mechanical (as well as a chemical) risk i.e. where there is abrasion or puncture potential		
	Gloves must only be worn on clean hands. After using gloves, hands should be		
	washed and dried thoroughly. Application of a non-perfumed moisturiser is recommended.		
Body protection	See Other protection below		
	Overalls		
	Eye wash unit		
	Barrier Cream		
	Skin Cleansing cream		
	 Some plastic personal protective equipment (PPE) (e.g. gloves, aprons, 		
	overshoes) are not recommended as they may produce static		
	electricity.		
	 For large scale or continuous use wear tight-weave non-static clothing (no metallic fasteners, cuffs or pockets). 		
Other protection	 Non sparking safety or conductive footwear should be considered. 		
Caner protection	Conductive footwear describes a boot or shoe with a sole made from a		
	conductive compound chemically bound to the bottom components, for		
	permanent control to electrically ground the foot an shall dissipate static		
	electricity from the body to reduce the possibility of ignition of volatile		
	compounds. Electrical resistance must range between 0 to 500,000		
	ohms. Conductive shoes should be stored in lockers close to the room in		
	which they are worn. Personnel who have been issued conductive		
	footwear should not wear them from their place of work to their homes		
	and return.		

Respiratory protection

Type A Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Selection of the Class and Type of respirator will depend upon the level of breathing zone contaminant and the chemical nature of the contaminant. Protection Factors (defined as the ratio of contaminant outside and inside the mask) may also be important.

Required minimum	Maximum gas/vapour	Half-face Respirator	Full-Face Respirator
protection factor	concentration present in		
	air p.p.m. (by volume)		
up to 10	1000	A-AUS / Class1	-
up to 50	1000	-	A-AUS / Class 1
up to 50	5000	Airline *	-
up to 100	5000	-	A-2
up to 100	10000	-	A-3
100+			Airline**

Continuous Flow ** - Continuous-flow or positive pressure demand

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content.

The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

Cartridge performance is affected by humidity. Cartridges should be changed after 2 hr of continuous use unless it is determined that the humidity is less than 75%, in which case, cartridges can be used for 4 hr. Used cartridges should be discarded daily, regardless of the length of time used.

Lower Explosive Limit (%)	Not Available	Volatile Component (%vol)	Not Available
Vapour pressure (kPa)	Negligible	Gas group	Not Available
Solubility in water	Immiscible	pH as a solution (1%)	Not Applicable
Vapour density (Air = 1)	>1	VOC g/L	Not Applicable
Heat of Combustion (kJ/g)	Not Available	Ignition Distance (cm)	Not Available
Flame Height (cm)	Not Available	Flame Duration (s)	Not Available
Enclosed Space Ignition Time		Enclosed Space	
Equivalent (s/m3)	Not Available	Ignition Deflagration	Not Available
		Density (g/m3)	

SECTION 10 Stability and reactivity

Reactivity	See section 7
Chemical stability	 Unstable in the presence of incompatible materials
	Product is considered stable
	Hazardous polymerisation will not occur
Possibility of hazardous reactions	See section 7
Conditions to avoid	See section 7
Incompatible materials	See section 7
Hazardous decomposition products	See section 5

SECTION 11 Toxicological information

Information on toxicological effects

	
a) Acute Toxicity	There is sufficient evidence to classify this material as acutely toxic.
b) Skin Irritation/Corrosion	There is sufficient evidence to classify this material as skin corrosive or irritating.
c) Serious Eye Damage/Irritation	There is sufficient evidence to classify this material as eye damaging or irritating
d) Respiratory or Skin sensitisation	Based on available data, the classification criteria are not met.
e) Mutagenicity	Based on available data, the classification criteria are not met.

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

f) Carcinogenicity	Based on available data, the classification criteria are not met.
g) Reproductivity	Based on available data, the classification criteria are not met.
h) STOT - Single Exposure	There is sufficient evidence to classify this material as toxic to specific organs through single exposure
i) STOT - Repeated Exposure	There is sufficient evidence to classify this material as toxic to specific organs through repeated exposure
j) Aspiration Hazard	Based on available data, the classification criteria are not met.

Inhaled	 The material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage. Inhalation of vapours may cause drowsiness and dizziness. This may be accompanied by sleepiness, reduced alertness, loss of reflexes, lack of co-ordination, and vertigo. Inhalation hazard is increased at higher temperatures. Inhalation of quantities of liquid mist may be extremely hazardous, even lethal due to spasm, extreme irritation of larynx and bronchi, chemical pneumonitis and pulmonary oedema. Inhalation of high concentrations of gas/vapour causes lung irritation with coughing and nausea, central nervous depression with headache and dizziness, slowing of reflexes, fatigue and inco-ordination 	
Ingestion	 Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual 	
Skin Contact	 This material can cause inflammation of the skin on contact in some persons. The material may accentuate any pre-existing dermatitis condition Skin contact with the material may damage the health of the individual; systemic effects may result following absorption. Open cuts, abraded or irritated skin should not be exposed to this material. Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. 	
Eye	This material can cause eye irritation and damage in some persons	
Chronic	 Long-term exposure to respiratory irritants may result in airways disease, involving difficulty breathing and related whole-body problems. Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure 	

3-CHLOROBENZOTRIFLUORIDE	TOXICITY IRRITATION	
	Inhalation (Rat) LC50: >0.024	Not Available
	mg/L4h ^[1]	
	Oral (Rat) LD50: >5000 mg/kg ^[1]	
Legend:	1. Value obtained from Europe ECHA Registered Substances - Acute toxicity	
	2. Value obtained from manufacturer's SDS. Unless otherwise specified data	
	extracted from RTECS - Register of Toxic Effect of chemical Substances	

3- CHLOROBENZOTRIFLUORIDE	Asthma-like symptoms may continue for months or even years after exposure to the material ends. This may be due to a non- allergic condition known as reactive airways dysfunction syndrome (RADS) which can occur after exposure to high levels of highly irritating compound. Main criteria for diagnosing RADS include the absence of previous airways disease in a non-atopic individual, with sudden onset of persistent asthma-like symptoms within minutes to hours of a documented exposure to the irritant. Other criteria for diagnosis of RADS include a reversible airflow pattern on lung function tests, moderate to severe bronchial hyperreactivity on methacholine challenge testing, and the lack of minimal lymphocytic inflammation, without eosinophilia. RADS (or asthma) following an irritating inhalation is an infrequent disorder as whether selected to the concentration of and
	duration of exposure to the irritating substance. On the other hand, industrial

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

bronchitis is a disorder that occurs as a result of exposure due to high concentrations of irritating substance (often particles) and is completely reversit after exposure ceases. The disorder is characterized by difficulty breathing, cough and mucus production. No significant acute toxicological data identified in literature search	ten particles) and is completely reversible aracterized by difficulty breathing, cough

SECTION 12 Ecological information

√- Data available to make classification

Toxicity

	End Point	Test Duration	Species	Value	Source
	DOE	(hr.)	F. 1	00.014	+_
3- CHLOROBENZOTRIFLUORIDE	BCF	1344h	Fish	90-214	/
	LC50	96h	Fish	70.7mg/l	2
	EC100(ECx)	96h	Fish	100mg/l	2
Legand:	Extracted from 1. IUCLID Toxicity Data 2. Europe ECHA Registered Substances - Ecotoxicological Information - Aquatic Toxicity 4. US EPA, Ecotox database - Aquatic Toxicity Data 5. ECETOC Aquatic Hazard				
	Assessment Data 6. NITE (Japan) - Bioconcentration Data 7. METI (Japan) -				
	Bioconcentration Data 8. Vendor Data				

Toxic to aquatic organisms.

Do NOT allow products to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.

Wastes resulting from use of the product must be disposed of on site or at approved waste sites May cause long-term adverse effects in the aquatic environment

DO NOT discharge into sewer or waterways

Persistence and degradability

Ingredient	Persistence: Water/Soil	Persistence: Air
3-chlorobenzotrifluoride	High	High

Bio accumulative potential

bio accamatative potentiat	
Ingredient	Bioaccumulation
3-chlorobenzotrifluoride	Low (BCF = 260)

Mobility in soil

Ingredient	Mobility
3-chlorobenzotrifluoride	LOW (Log KOC = 1912)

SECTION 13 Disposal considerations

Waste treatment methods

Wasto troutinont motilious		
Product / Packaging	•	Containers may still present a chemical hazard/ danger when empty
disposal	•	Return to supplier for reuse/ recycling if possible.

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

Otherwise:

- If container cannot be cleaned sufficiently well to ensure that residuals do
 not remain or if the container cannot be used to store the same product,
 then puncture containers, to prevent re-use, and bury at an authorised
 landfill
- Where possible retain label warnings and SDS and observe all notices pertaining to the product

Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked.

A Hierarchy of Controls seems to be common - the user should investigate:

- Reduction
- Reuse
- Recycling
- Disposal (if all else fails)

This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use. Shelf life considerations should also be applied in making decisions of this type. Note that properties of a material may change in use, and recycling or reuse may not always be appropriate. In most instances the supplier of the material should be consulted.

- DO NOT allow wash water from cleaning or process equipment to enter drains
- It may be necessary to collect all wash water for treatment before disposal
- In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first.
- Where in doubt contact the responsible authority
- Recycle wherever possible.
- Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.
- Dispose of by: burial in a land-fill specifically licensed to accept chemical and / or pharmaceutical wastes or Incineration in a licensed apparatus (after admixture with suitable combustible material).
- Decontaminate empty containers. Observe all label safeguards until containers are cleaned and destroyed

SECTION 14 Transport information

Labels Required

Labels Required	
Marine Pollutant	¥2

Land transport (UN)

Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

Definitions and abbreviations

PC - TWA: Permissible Concentration-Time Weighted Average

PC - STEL: Permissible Concentration-Short Term Exposure Limit

3-Chlorobenzotrifluoride

Revision Date: 01-03-23 Revision Number: 6.1

IARC: International Agency for Research on Cancer

ACGIH: American Conference of Governmental Industrial Hygienists

STEL: Short Term Exposure Limit

TEEL: Temporary Emergency Exposure Limit

IDLH: Immediately Dangerous to Life or Health Concentrations.

ES: Exposure Standard OSF: Odour Safety Factor

NOAEL: No Observed Adverse Effect Level LOAEL: Lowest Observed Adverse Effect Level

TLV: Threshold Limit Value LOD: Limit Of Detection OTV: Odour Threshold Value BCF: Bio Concentration Factors BEI: Biological Exposure Index DNEL: Derived No-Effect Level

PNEC: Predicted no-effect concentration
